Proceedings of SPIE, 1605-7422, v. 7168

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Printed in the United States of America.

Publication of record for individual papers is online in the SPIE Digital Library.

SPIE 
Digital Library

SPIDigitalLibrary.org

Paper Numbering: Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

Contents

xi	Conference Committee
xiii	Introduction

SESSION 1 OPTHALMIC OCT: NEW TECHNOLOGY

- 7168 07 **The broadest spectral bandwidth suitable for in-vivo UHROCT imaging of human and animal retina at 1060nm** [7168-06]
S. Hariri, A. A. Moayed, C. Hyun, Univ. of Waterloo (Canada); V. Shidlovski, Superlum (Russian Federation); A. Dracopoulos, S. Boyd, St. Michael's Hospital and Univ. of Toronto (Canada); K. Bizheva, Univ. of Waterloo (Canada)

SESSION 2 OPTHALMIC/DOPPLER

- 7168 08 **Blood flow imaging at deep posterior human eye using 1 μm spectral-domain optical coherence tomography** [7168-07]
S. Makita, Univ. of Tsukuba (Japan) and Computational Optics and Ophthalmology Group (Japan); T. Fabritius, Univ. of Tsukuba (Japan) and Univ. of Oulu (Finland); Y. Yasuno, Univ. of Tsukuba (Japan) and Computational Optics and Ophthalmology Group (Japan)
- 7168 09 **Velocity-resolved single-pass volumetric retinal flow imaging spectral domain optical coherence tomography** [7168-08]
Y. K. Tao, K. M. Kennedy, J. A. Izatt, Duke Univ. (United States)
- 7168 0A **Cyclic reconstruction of 4D retinal blood flow with pulse synchronization** [7168-09]
T. Schmöll, Medical Univ. of Vienna (Austria); T. Lasser, Ecole Polytechnique Fédérale de Lausanne (Switzerland); R. A. Leitgeb, Medical Univ. of Vienna (Austria)
- 7168 0B **Investigation of retinal blood flow in normal and glaucoma subjects by Doppler Fourier-domain optical coherence tomography** [7168-10]
Y. Wang, O. Tan, D. Huang, Doheny Eye Institute and Keck School of Medicine, Univ. of Southern California (United States)
- 7168 0C **Segmentation of flowing particles using joint spectral and time domain optical coherence tomography** [7168-11]
I. Grulkowski, A. Szkulmowska, M. Szkulmowski, M. Gora, D. Szlag, A. Kowalczyk, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)

SESSION 3 CELLULAR AND SMALL ANIMAL IMAGING

- 7168 0E **Imaging of cardiovascular dynamics in early mouse embryos with swept source optical coherence tomography** [7168-13]
I. V. Larina, Baylor College of Medicine (United States); M. Liebling, Univ. of California, Santa Barbara (United States); M. E. Dickinson, Baylor College of Medicine (United States); K. V. Larin, Univ. of Houston (United States)

7168 0G **Sequential en-face optical coherence tomography imaging and monitoring of *Drosophila Melanogaster* larval heart** [7168-15]
A. Bradu, L. Ma, J. Bloor, A. Gh. Podoleanu, Univ. of Kent (United Kingdom)

7168 0H **Modelling the optical response of human retinal photoreceptors to plane wave illumination with the finite integration technique** [7168-16]
A. Akhlagh Moayed, S. Dang, O. M. Ramahi, K. K. Bizheva, Univ. of Waterloo (Canada)

SESSION 4 CLINICAL APPLICATIONS

7168 0N **Ex vivo imaging of human pathologies with integrated optical coherence tomography (OCT) and optical coherence microscopy (OCM)** [7168-22]
C. Zhou, Massachusetts Institute of Technology (United States); A. D. Aguirre, Massachusetts Institute of Technology (United States) and Harvard-MIT Division of Health Sciences and Technology (United States); Y. Wang, B. Bryan, Beth Israel Deaconess Medical Ctr., Harvard Medical School (United States); T.-H. Tsai, Massachusetts Institute of Technology (United States); J. L. Connolly, Beth Israel Deaconess Medical Ctr., Harvard Medical School (United States); J. G. Fujimoto, Massachusetts Institute of Technology (United States)

SESSION 5 NOVEL CONTRAST MECHANISMS

7168 0S **Photothermal optical coherence tomography of epidermal growth factor receptor in live cells using immunotargeted gold nanospheres** [7168-27]
M. C. Skala, M. J. Crow, A. Wax, J. A. Izatt, Duke Univ. (United States)

7168 0T **Validation of nonlinear interferometric vibrational imaging as a molecular OCT technique by the use of Raman microscopy** [7168-28]
W. A. Benalcazar, Beckman Institute for Advanced Science and Technology (United States) and Univ. of Illinois at Urbana-Champaign (United States); Z. Jiang, D. L. Marks, J. B. Geddes, Beckman Institute for Advanced Science and Technology (United States); S. A. Boppart, Beckman Institute for Advanced Science and Technology (United States) and Univ. of Illinois at Urbana-Champaign (United States)

7168 0W **Dual window method for processing spectroscopic optical coherence tomography signals with high spectral and spatial resolution** [7168-31]
F. E. Robles, R. N. Graf, A. Wax, Duke Univ. (United States)

SESSION 6 ENDOSCOPIC/CATHETER TECHNOLOGY

7168 12 **Three-dimensional in vivo swept source endoscopic OCT based on rigid GRIN lens rod probe** [7168-37]
G. Liu, T. Xie, J. Zhang, G. M. Peavy, M. Brenner, Z. Chen, Beckman Laser Institute, Univ. of California Irvine (United States)

7168 13 **Cross-polarization endoscopic optical coherence tomography in urology** [7168-38]
E. V. Zagaynova, N. D. Gladkova, Nizhny Novgorod State Medical Academy (Russian Federation); V. M. Gelikonov, Institute of Applied Physics (Russian Federation); O. S. Streltsova, D. S. Ledayev, V. A. Atduev, E. V. Balandina, L. B. Snopova, Nizhny Novgorod State Medical Academy (Russian Federation)

SESSION 7 POLARIZATION SENSITIVE

- 7168 14 **Quantitative measurement of the degree of polarization uniformity of light backscattered by retinal layers by polarization sensitive OCT [7168-39]**
C. K. Hitzenberger, E. Götzinger, M. Pircher, B. Baumann, C. Ahlers, W. Geitzenauer, C. Schütze, U. Schmidt-Erfurth, Medical Univ. of Vienna (Austria)
- 7168 16 **Discrimination of conjunctiva and sclera using texture analysis of polarization sensitive optical coherence tomography images [7168-41]**
A. Miyazawa, M. Yamanari, Y. Yasuno, Univ. of Tsukuba (Japan)
- 7168 17 **Polarization-sensitive swept-source optical coherence tomography at 1 μ m for birefringence imaging of the posterior segment of the eye [7168-42]**
M. Yamanari, S. Makita, Y. Yasuno, Univ. of Tsukuba (Japan) and Computational Optics and Ophthalmology Group (Japan)
- 7168 19 **Polarization-maintaining fiber-based optical coherence tomography for polarization sensitive measurements [7168-44]**
M. K. Al-Qaisi, T. Akkin, Univ. of Minnesota, Twin Cities (United States)

SESSION 8 FULL FIELD/PARALLEL/PHASE CONTRAST METHODS

- 7168 1C **Synthetic wavelength-based phase unwrapping in Fourier domain optical coherence tomography [7168-47]**
H. C. Hendargo, M. Zhao, N. Shepherd, J. A. Izatt, Duke Univ. (United States)
- 7168 1E **Swept-source parallel OCT [7168-49]**
M. Mujat, N. Iftimia, R. D. Ferguson, D. X. Hammer, Physical Sciences, Inc. (United States)
- 7168 1H **Real-time single-shot full-field OCT based on dual-channel phase-stepper optics and 2D quaternionic analytic signal processing [7168-52]**
M. S. Hrebesh, M. Sato, Yamagata Univ. (Japan)

SESSION 9 SIGNAL/IMAGE PROCESSING

- 7168 1I **Dispersion encoded full range frequency domain OCT [7168-53]**
B. Hofer, Cardiff Univ. (United Kingdom) and Vienna Univ. of Technology (Austria); B. Povazay, B. Hermann, A. Unterhuber, Cardiff Univ. (United Kingdom); G. Matz, Vienna Univ. of Technology (Austria); W. Drexler, Cardiff Univ. (United Kingdom)
- 7168 1K **Simultaneous complex ambiguity removal and quantitative flow velocity estimation with joint spectral and time domain OCT [7168-55]**
M. Szkulmowski, I. Grulkowski, D. Szlag, A. Szkulmowska, A. Kowalczyk, M. Wojtkowski, Nicolaus Copernicus Univ. (Poland)
- 7168 1L **From Talbot bands to no mirror terms in Fourier domain OCT: a quest on the fundamental origin of the sensitivity decay with depth [7168-56]**
A. Gh. Podoleanu, D. Woods, M. Hughes, Univ. of Kent (United Kingdom)

- 7168 1M **AM-FM analysis of optical coherence tomography signals** [7168-57]
A. Kartakoulis, E. Bousi, C. Pitris, Univ. of Cyprus (Cyprus)
- 7168 1N **Image blending and speckle noise reduction in multi-beam OCT** [7168-58]
J. Holmes, S. Hattersley, Michelson Diagnostics Ltd. (United Kingdom)

SESSION 10 DOPPLER OCT

- 7168 1P **In vivo bidirectional Doppler Fourier-domain optical coherence tomography for measurement of absolute flow velocities** [7168-60]
R. M. Werkmeister, N. Dragostinoff, M. Pircher, E. Götzinger, C. K. Hitzenberger, R. A. Leitgeb, L. Schmetterer, Medical Univ. of Vienna (Austria)
- 7168 1Q **New model for space encoded Fourier domain optical Doppler tomography** [7168-61]
E. Koch, J. Walther, M. Cuevas, Univ. of Technology Dresden (Germany)
- 7168 1S **Flow measurement by using the signal decrease of moving scatterers in spatially encoded Fourier domain optical coherence tomography** [7168-63]
J. Walther, E. Koch, Univ. of Technology Dresden (Germany)
- 7168 1T **Spectral Doppler imaging of micro-vasculature response to laser irradiation** [7168-64]
B. Rao, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States); W. Jia, L. Yu, Beckman Laser Institute, Univ. of California, Irvine (United States); B. Choi, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States); R. M. Kurtz, Univ. of California, Irvine (United States); J. S. Nelson, Beckman Laser Institute, Univ. of California, Irvine (United States); Z. Chen, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States)

SESSION 11 NOVEL TECHNOLOGY

- 7168 1X **OCT speckle reduction with angular compounding by B-scan Doppler-shift encoding** [7168-68]
H. Wang, A. M. Rollins, Case Western Reserve Univ. (United States)

SESSION 12 NOVEL LIGHT SOURCES

- 7168 21 **Isolator-free 840-nm broadband SLEDs for high-resolution OCT** [7168-72]
M. Duell, V. Laino, P. Navaretti, R. Rezzonico, C. Armistead, C. Vélez, EXALOS AG (Switzerland)
- 7168 22 **High-power 1300-nm FDML swept laser using polygon-based narrowband optical scanning filter** [7168-73]
Y. Mao, C. Flueraru, S. Chang, National Research Council Canada (Canada); S. Sherif, University of Manitoba (Canada)
- 7168 23 **Novel wavelength-swept Raman laser for arbitrary gain band OCT** [7168-74]
E. J. Jung, H. S. Lee, J. S. Park, M. Y. Jeong, C. S. Kim, Pusan National Univ. (Republic of Korea)

- 7168 24 **Frequency-swept laser light source at 1050 nm with higher bandwidth due to multiple semiconductor optical amplifiers in series** [7168-75]
S. Marschall, L. Thrane, P. E. Andersen, C. Pedersen, Technical Univ. of Denmark (Denmark); K. Hsu, Micron Optics, Inc. (United States)
- 7168 25 **100-kHz axial scan rate swept-wavelength OCT using sampled grating distributed Bragg reflector lasers** [7168-76]
S. O'Connor, M. A. Bernacil, A. DeKelaita, B. Maher, D. Derickson, California Polytechnic State Univ. (United States)
- 7168 26 **1.0- μ m semiconductor light sources with wide bandwidth for optical coherence tomography** [7168-77]
Y. Morishima, A. Mukai, T. Ohgoh, J. Yaguchi, H. Asano, FUJIFILM Corp. (Japan)

POSTER SESSION

- 7168 27 **Automated retinal pigment epithelium identification from optical coherence tomography images** [7168-78]
T. Fabritius, Univ. of Oulu (Finland) and Computational Optics Group (Japan); S. Makita, Computational Optics Group (Japan); R. Myllylä, Univ. of Oulu (Finland); Y. Yasuno, Computational Optics Group (Japan)
- 7168 28 **Screening retinal transplants with Fourier-domain OCT** [7168-79]
B. Rao, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States); L. Yu, Beckman Laser Institute, Univ. of California, Irvine (United States); R. B. Aramant, Univ. of California, Irvine (United States) and Univ. of Louisville (United States); S. Pham, Beckman Laser Institute, Univ. of California, Irvine (United States); H. K. Keirstead, Univ. of California, Irvine (United States); Z. Chen, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States); M. J. Seiler, Univ. of California, Irvine (United States)
- 7168 29 **Depolarization properties of the normal human fovea** [7168-80]
W.-S. T. Lam, R. A. Chipman, K. M. Twietmeyer, College of Optical Sciences, The Univ. of Arizona (United States); Y. Zhou, Indiana Univ. (United States); K. R. Denninghoff, College of Optical Sciences, The Univ. of Arizona (United States) and The Univ. of Arizona (United States); A. E. Elsner, S. A. Burns, Indiana Univ. (United States)
- 7168 2A **Office-based laryngeal imaging in awake patients with swept-source optical coherence tomography** [7168-81]
L. Yu, G. Liu, S. Guo, B. J. F. Wong, Z. Chen, Beckman Laser Institute, Univ. of California, Irvine (United States) and Beckman Laser Institute, Univ. of California, Irvine (United States)
- 7168 2C **Enhanced OCT imaging of embryonic tissue with optical clearing** [7168-83]
I. V. Larina, Baylor College of Medicine (United States); E. F. Carbajal, Univ. of Houston (United States); V. V. Tuchin, Saratov State Univ. (Russian Federation) and Institute of Precise Mechanics and Control (Russian Federation); M. E. Dickinson, Baylor College of Medicine (United States); K. V. Larin, Univ. of Houston (United States) and Saratov State Univ. (Russian Federation)

- 7168 2D **Maximum intensity projection imaging for dynamic analysis of mental sweating by optical coherence tomography** [7168-84]
H. Saigusa, Y. Ueda, M. Ohmi, M. Ohnishi, M. Kuwabara, M. Haruna, Osaka Univ. (Japan)
- 7168 2F **Imaging of dental implant osseointegration using optical coherent tomography** [7168-86]
I. Ionita, Univ. of Bucharest (Romania); P. Reisen, Thorlabs (United States)
- 7168 2G **A liquid-based skin and blood flow model for Doppler optical coherence tomography imaging** [7168-87]
G. Dinsdale, N. Bensaid, A. K. Murray, The Univ. of Manchester (United Kingdom); P. E. C. Brenchley, Manchester Royal Infirmary (United Kingdom); M. R. Dickinson, The Univ. of Manchester (United Kingdom)
- 7168 2H **In vivo depth-resolved tissue contrast by local birefringence and differential optic axis orientation using polarization-sensitive swept-source optical coherence tomography** [7168-88]
S. Makita, M. Yamanari, Y. Yasuno, Univ. of Tsukuba (Japan)
- 7168 2I **Single-body lensed fiber probe actuated by magnetic force for real-time spectral domain optical coherence tomography** [7168-89]
E. J. Min, J. Na, S. Y. Ryu, B. H. Lee, Gwangju Institute of Science and Technology (Republic of Korea)
- 7168 2K **Evaluation of the signal noise ratio enhancement of SS-OCT versus TD-OCT using a full field interferometer** [7168-91]
J. Wang, Univ. of Kent (United Kingdom); M. Hathaway, Ophthalmic Technologies U.K. (United Kingdom); V. Shidlovski, Superlum Diodes (Russian Federation); C. Dainty, National Univ. of Ireland, Galway (Ireland); A. Podoleanu, Univ. of Kent (United Kingdom)
- 7168 2L **Axial resolution and depth range of high-resolution spectral domain optical coherence tomography at 1.3 μm** [7168-92]
S.-W. Lee, H.-W. Jeong, Yonsei Univ. (Republic of Korea); Y.-C. Ahn, Beckman Laser Institute, Univ. of California, Irvine (United States) and Univ. of California, Irvine (United States); W. Jung, Univ. of California, Irvine (United States); Z. Chen, Beckman Laser Institute, Univ. of California, Irvine (United States) and Univ. of California, Irvine (United States); B.-M. Kim, Yonsei Univ. (Republic of Korea)
- 7168 2M **Artifact removal in FD-OCT with a B-M mode scanning technique: condition on the transverse step** [7168-93]
S. Vergnole, G. Lamouche, National Research Council Canada (Canada)
- 7168 2N **Speckle reduction during all-fiber common-path optical coherence tomography of the cavernous nerves** [7168-94]
S. Chitchian, M. Fiddy, N. M. Fried, The Univ. of North Carolina at Charlotte (United States)
- 7168 2O **The potential of optical coherence tomography in meniscal tear characterization** [7168-95]
H. Ling, S. Guo, K. Thieman, B. T. Wise, A. Pozzi, H. Xie, M. Horodyski, Univ. of Florida (United States)

7168 2P **Coherent fibre bundles in full-field swept-source OCT** [7168-96]
H. D. Ford, R. P. Tatam, Cranfield Univ. (United Kingdom)

Introduction

These proceedings are from the conference on Optical Coherence Tomography and Coherence Domain Optical Methods in Biomedicine XIII, held 26-28 January, 2009 at SPIE's Photonics West Symposium in San Jose, California. This year's conference featured 96 oral and poster presentations from leading national and international research groups.

The conference was organized into several sessions, including: Ophthalmic OCT: New Technology; Ophthalmic/Doppler; Cellular and Small Animal Imaging; Clinical Applications; Novel Contrast Mechanisms; Endoscopic/Catheter Technology; Polarization Sensitive; Full Field/Parallel/Phase Contrast Methods; Signal/Imaging Processing; Doppler OCT; Novel Technology; and Novel Light Sources, and a poster session with 19 presentations. As usual, a predominant fraction of the papers focused on optical coherence tomography – basic research, instrumentation, and applications.

This year, there were significant advances in ophthalmic research using OCT (three sessions: Ophthalmic OCT: New Technology, Ophthalmic/Doppler, and Polarization Sensitive) with 15 oral and 3 poster presentations) with discussion of *in vivo* FD OCT of the human retina with up to 312,000 lines/s and other fast real-time OCT systems based on ultra-high-speed swept light sources, blood flow imaging at deep posterior human eye, cyclic reconstruction of 4D retinal blood flow with pulse synchronization, comparative study of retinal blood flow in normal and glaucoma subjects, novel method of optical blood perfusion micro-angiography within human retina and choroids, quantitative measurement of polarization properties of retinal layers, discrimination of conjunctiva and sclera using PS OCT, and providing birefringence imaging of the posterior eye segment.

Application of OCT technology to cellular and small animal imaging is a novel approach in cell and development biology, which was presented in the special session on Cellular and Small Animal Imaging and other sessions with ten oral and two poster presentations, with discussion of cellular structure in the living human retina by means of ultra-high-speed and spatial resolution OCT with pancorrection, modeling OCT signal response of human retinal photoreceptors to plane wave illumination and experimental probing of retinal physiology in rats *in vivo*, measuring apoptosis in human RPE cells based on OCT monitoring of light scattering change, imaging of cardiovascular dynamics in mouse embryos by swept source OCT, enhanced OCT imaging of embryonic tissue with optical clearing, photothermal OCT of epidermal growth factor receptor in living cells using immunotargeted gold nanospheres, subcellular vibrational imaging using a molecular OCT/Raman technique, OCT detection of mechanical resonances used for elastography of small biosamples, screening retinal transplants, and imaging the structure and growth of three-dimensional ovarian tumor models.

Nine oral presentations in the sessions on Clinical Applications and Endoscopic/Catheter Technology reported advanced OCT technologies for *in vivo* visualization and quantification of coronary artery microstructure in humans, three-dimensional endomicroscopy of the human colon, cardiac radiofrequency ablation, pancreatic cancer diagnosis and guided therapy, oral cancer diagnosis, microstructures and metastasis in human breast lymph nodes, and urological disease.

The sessions on Endoscopic/Catheter Technology, Polarization Sensitive, Full Field/Parallel/Phase Contrast Methods, Signal/Imaging Processing, Doppler OCT, Novel Technology, and Novel Light Sources contained 33 oral papers and 5 poster presentations devoted to further development of OCT components and whole systems, such as real-time swept source OCT for human airway imaging using a microelectromechanical system endoscope and digital signal processor, robust high-resolution fine OCT needle, transverse scanning phase contrast coherence microscopy, swept source parallel OCT, real-time single-shot full-field OCT based on dual-channeled phase-stepper optics and two-dimensional quaternionic analytic signal processing, dispersion encoded full-range FD OCT, interferometric synthetic aperture microscopy with a portable intraoperative OCT system, bi-directional Doppler FD OCT system, OCT speckle reduction with angular compounding by B-scan Doppler-shift encoding, ultra-miniature swept source for point care FD OCT, novel wavelength-swept Raman laser for arbitrary gain band OCT, and 100-kHz axial scan rate swept-wavelength OCT.

The poster session contained 19 papers on the major above-mentioned topics.

A short course for engineers, scientists, and clinicians, SC312 - Principles and Applications of Optical Coherence Tomography by James Fujimoto, accompanied the conference.

All submissions were fully peer-reviewed and authors were requested to submit a three-page summary of their paper. The program committee evaluated the submissions for technical content and assigned a numerical score to each paper. The selection of the papers as oral presentations, posters, or non-acceptance was based upon the program committee score. Although this process was time-consuming, we felt that it was important for the conference, and many participants felt that the technical quality and novelty of the papers had increased as the result of peer review. The peer review also provided a fairer assessment of the submitted papers.

The conference chairs would like to thank the members of the technical program committee for their help in organizing the conference. We sincerely appreciate the support of the SPIE and the conference staff. Finally, we would like to thank all of the conference attendees and manuscript authors for their contributions and participation which helped to make this meeting a success.
