**Volume 7800**

Proceedings of SPIE, 0277-786X, v. 7800

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

The papers included in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. The papers published in these proceedings reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from this book:

Author(s), "Title of Paper," in *Image Reconstruction from Incomplete Data VI*, edited by Philip J. Bones, Michael A. Fiddy, Rick P. Millane, Proceedings of SPIE Vol. 7800 (SPIE, Bellingham, WA, 2010) Article CID Number.

**Paper Numbering:** Proceedings of SPIE follow an e-First publication model, with papers published first online and then in print and on CD-ROM. Papers are published as they are submitted and meet publication criteria. A unique, consistent, permanent citation identifier (CID) number is assigned to each article at the time of the first publication. Utilization of CIDs allows articles to be fully citable as soon they are published online, and connects the same identifier to all online, print, and electronic versions of the publication. SPIE uses a six-digit CID article numbering system in which:

- The first four digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc.

The CID number appears on each page of the manuscript. The complete citation is used on the first page, and an abbreviated version on subsequent pages. Numbers in the index correspond to the last two digits of the six-digit CID number.

# Contents

vii	<i>Conference Committee</i>
ix	<i>Introduction</i>

---

## SESSION 1 TOMOGRAPHY WITH LIMITED DATA

---

- 7800 02 **Structure from random snapshots (Invited Paper)** [7800-01]  
A. Ourmazd, P. Schwander, Univ. of Wisconsin-Milwaukee (United States); G. N. Phillips, Jr., Univ. of Wisconsin-Madison (United States)
- 7800 03 **A layered media approach to photoacoustic tomography** [7800-02]  
R. W. Schoonover, Pritzker Institute of Biomedical Engineering and Science, Illinois Institute of Technology (United States); M. A. Anastasio, Pritzker Institute of Biomedical Engineering and Science, Illinois Institute of Technology (United States) and Illinois Institute of Technology (United States)
- 7800 04 **Investigation of limited-view image reconstruction in optoacoustic tomography employing a priori structural information** [7800-03]  
C. Huang, Medical Imaging Research Ctr., Illinois Institute of Technology (United States); A. A. Oraevsky, TomoWave Labs., Inc. (United States); M. A. Anastasio, Medical Imaging Research Ctr., Illinois Institute of Technology (United States)
- 7800 05 **Sampling rates and image reconstruction from scattered fields** [7800-04]  
U. Shahid, M. A. Fiddy, The Univ. of North Carolina at Charlotte (United States); M. E. Testorf, Dartmouth College (United States)

---

## SESSION 2 IMAGE RECOVERY AND SENSING I

---

- 7800 06 **Reconstructing MR images from under- or unevenly-sampled k-space** [7800-05]  
L. Vu, A. R. Hajian, P. H. Calamai, A. T. Cenko, S. Rasheed, Univ. of Waterloo (Canada); J. K. Kim, Thunder Bay Regional Research Institute (Canada); C. Piron, Sentinelle Medical Inc. (Canada); S. S. So, J. T. Meade, Univ. of Waterloo (Canada); K. H. Knuth, Univ. at Albany (United States)
- 7800 07 **Imposing spatio-temporal support in magnetic resonance angiographic imaging** [7800-06]  
P. J. Bones, B. Vafadar, R. Watts, Univ. of Canterbury (New Zealand); B. Wu, Duke Univ. (United States)
- 7800 08 **Weighted least-squares image reconstruction in phase-contrast tomography** [7800-07]  
P.-Y. Huang, C.-Y. Chou, National Taiwan Univ. (Taiwan)
- 7800 09 **Three-dimensional image visualization by maximum a posteriori estimation photon-counting integral imaging** [7800-08]  
C. M. Do, Univ. of Connecticut (United States)

- 7800 0A **In situ determination of wind fields from sailplane flight data** [7800-09]  
N. Zhang, R. P. Millane, Univ. of Canterbury (New Zealand); A. J. Hunter, Univ. of Bristol (United Kingdom)

---

**SESSION 3 IMAGE RECOVERY AND SENSING II**

---

- 7800 0B **Information theoretic characterizations of compressive-sensing-based space object identification** [7800-10]  
S. Prasad, D. Hope, Univ. of New Mexico (United States)
- 7800 0E **Continuous surface fitting to spatial optical interferometer data** [7800-13]  
S. Rasheed, A. R. Hajian, Univ. of Waterloo (Canada); C. Tycner, Central Michigan Univ. (United States); L. Vu, Univ. of Waterloo (Canada)

---

**SESSION 4 ALGORITHMS AND IMPLEMENTATION**

---

- 7800 0F **Compressive phase contrast tomography** [7800-15]  
F. Maia, A. MacDowell, S. Marchesini, H. A. Padmore, D. Y. Parkinson, Lawrence Berkeley National Lab. (United States); J. Pien, CUDA Consultant (United States); A. Schirotzek, C. Yang, Lawrence Berkeley National Lab. (United States)
- 7800 0G **Rethinking image registration on customizable hardware** [7800-16]  
D. Bowman, M. Tahtali, A. Lambert, UNSW@ADFA (Australia)
- 7800 0H **Graphics processing unit restoration of non-uniformly warped images using a typical frame as prototype** [7800-17]  
M. Tahtali, A. J. Lambert, D. Fraser, UNSW@ADFA (Australia)

---

**SESSION 5 HIGH RESOLUTION IMAGING**

---

- 7800 0I **Multiple image reconstruction for high-resolution optical imaging using structured illumination (Invited Paper)** [7800-18]  
S. Usuki, Shizuoka Univ. (Japan); R. Kudo, S. Takahashi, K. Takamasu, The Univ. of Tokyo (Japan)
- 7800 0J **Geometric superresolution using CCD-mask** [7800-19]  
I. U. Haq, A. A. Mudassar, Pakistan Institute of Engineering and Applied Sciences (Pakistan)
- 7800 0K **Ill-posedness of space-variant image deconvolution** [7800-20]  
M. Kieweg, H. Gross, T. Sievers, L. Müller, Carl Zeiss AG (Germany)
- 7800 0L **3D signal reconstruction from noisy projection data for stochastic objects as a generalization of Gaussian mixture parameter estimation** [7800-21]  
Y. Zheng, Lawrence Berkeley National Lab. (United States); P. C. Doerschuk, Cornell Univ. (United States)
- 7800 0M **Scattered image reconstruction of Pulsar B0834+06** [7800-22]  
J. J. Gao, B. J. Rickett, W. A. Coles, Univ. of California, San Diego (United States)

---

**SESSION 6    MOLECULAR IMAGING**

---

- 7800 ON    **Image reconstruction using symmetry** [7800-23]  
V. L. Lo, R. P. Millane, Univ. of Canterbury (New Zealand)
- 7800 OO    **Reconstruction of the electron density of molecules with single-axis alignment** [7800-24]  
D. Starodub, SLAC National Accelerator Lab. (United States); J. C. H. Spence, Arizona State Univ. (United States); D. K. Saldin, Univ. of Wisconsin-Milwaukee (United States)
- 7800 OP    **Orientation determination for 3D single molecule diffraction imaging** [7800-25]  
C. Yang, Lawrence Berkeley National Lab. (United States); Z. Wang, Emory Univ. (United States); S. Marchesini, Lawrence Berkeley National Lab. (United States)
- 7800 OQ    **Understanding stochastic biological macromolecular complexes by estimating a mechanical model via statistical mechanics from cryo electron microscopy images** [7800-26]  
K. Wang, P. C. Doerschuk, Cornell Univ. (United States)
- 7800 OR    **Classification of cryo electron microscopy images, noisy tomographic images recorded with unknown projection directions, by simultaneously estimating reconstructions and application to an assembly mutant of Cowpea Chlorotic Mottle Virus and portals of the bacteriophage P22** [7800-27]  
J. Lee, The Johns Hopkins Univ. (United States); Y. Zheng, Lawrence Berkeley National Lab. (United States); Z. Yin, GE Global Research (United States); P. C. Doerschuk, Cornell Univ. (United States); J. E. Johnson, The Scripps Research Institute (United States)

Computational Imaging II: Joint Session with Conference 7798  
**Dan Lelescu**, Pelican Imaging Corporation (United States)

## Introduction

**Image Reconstruction from Incomplete Data VI (IRID-VI)** was held 2–3 August 2010. A total of 27 papers were accepted for presentation. In addition two joint sessions with Conference 7798 (Applications of Digital Image Processing XXXIII) were scheduled and an excellent plenary address by Mohammad A. Karim on "Optics in antiquity."

This conference continues those of the same name held at the SPIE Annual Meetings in San Diego in 2000, Seattle in 2002, Denver in 2004, and at SPIE Optics + Photonics in San Diego in 2006 and 2008. Conferences on this foundational topic of imaging when measured data are limited, noisy or corrupted somehow have a long history with SPIE under the auspices of the Mathematical Imaging Program. Early meetings on this subject include Applications of Mathematics in Modern Optics (Vol. 358), chaired by W.H. Carter in 1981 at which 29 papers were presented and Inverse Optics I (Vol. 413), edited by A. J. Devaney in 1982 which had 30 papers. The objective of these meetings and the twenty or so that have followed has been to bring together those working on a variety of imaging and inverse problems from a broad range of disciplines. The underlying mathematical structures to image reconstruction and restoration methods are widely applicable to a number of quite different imaging modalities, and the cross fertilization of ideas between those working in these diverse areas is always very stimulating.

In addition to the half day joint session on computational imaging with Applications of Digital Image Processing XXXIII, this year's conference was divided into sessions on tomography with limited data, algorithms and implementation, high resolution imaging, molecular imaging, and two sessions on imaging and sensing. The opening invited presentation by Abbas Ourmazd, "Tomography with random snapshots of faint non-stationary objects" set the scene very well for the conference. The talk illustrated key challenges that attendees and others in the field of image recovery are facing, namely how to combine noisy data sets together, with the help of constraints to generate useful images of either identical or different objects. A number of other papers presented complimented this theme. In the second invited presentation, Usuki et al. described adding redundancy, or additional information, by using structured illumination for optical microscopy of semiconductor wafers. The role of symmetry received particular attention from a number of presenters and in discussions. As in previous years, a wide range of applications from astronomy to imaging viruses, demonstrated the commonality of many imaging problems when using incomplete data.

During this conference there was an opportunity to have an open discussion about challenges and future directions in the field. This took place in session 3 under the themed title of "Challenges in Image Recovery". The conversation was wide ranging and identified several of the factors which in 2010 are generating

challenges. Despite the advances which have been made in digital processing and methodology, it was recognized that ever more difficult imaging problems meant that the field is still faced with many more challenges. The discussion can be summarized by the following bullets:

- Fewer and fewer measurements:
  - the need to reduce acquisition time (e.g. MRI)
  - sparse data collection as an economic or technical necessity (e.g. radio astronomy)
  - fewer measurements require a more trustworthy model
- High noise environments:
  - low dose (e.g. cryoEM, X-ray CT)
  - more extreme experimental requirements (e.g. exploding molecules)
  - need to move away from Gaussian models
- Multiple object classes:
  - different conformations
  - different configurations
  - different orientations
  - different objects (e.g. before and after a reaction, evolving objects)
- Cheaper & cheaper "optics":
  - availability of adaptive systems
  - smart optics
  - new sensors
  - 'no optics' optics
  - driven by the cost of high quality optics
- Maybe we do not need an image at all (!):
  - parameters, not pictures
  - decisions, not pictures
  - meaning comes from the dataset
  - What is an image? (When is a set of numbers an image?)
- Need to evaluate image quality:
  - probably has to be task specific
  - need to design experiments (e.g. how much data are needed to achieve a specific goal, what types, what quality?)
- Exploiting prior knowledge:
  - Is symmetry the most powerful prior knowledge?
  - How to best identify available priors?
  - How to optimally incorporate priors into the recovery process?

The quality of the presentations was high and interactions between participants were productive. The chairs would like to thank the participants, authors, and the program committee members, for their part in making this meeting so successful. Special thanks also go to the professional and efficient staff at SPIE for their assistance over the last year. We look forward to IRID-VII in 2012.

**Philip J. Bones**  
**Michael A. Fiddy**  
**Rick P. Millane**
